

NEW AND IMPROVED K29 FLEXIGUN®

So, What's different about the new FLEXIGUN®?

It's all in the valving.

The Classic FLEXIGUN incorporates a unique 'one way inlet' assembly to allow increased grease pressure through short strokes.

To compliment this feature, Macnaught's engineers have created a new 'full flow' p behind the integral 'one way inlet'.

This new feature allows grease freer movement from the cartridge to the pressure chamber so promotes faster recovery between strokes.

What does this mean? It means you still get the unique pressure build function with short strokes but if it's volume you need in a hurry, the NEW improved FLEXIGUN® right there with you.

Features

- Pistol grip design for one handed operation
- 230 mm (9") flexible extension and KY coupler
- Refillable by cartridge, bulk or J2 grease pump
- Also available in a complete greasing kit (FGK1, K29-12, K29C-12)
- Fully serviceable
- 10 year limited warranty and parts guarantee
- Order K32 for 400 gram model

Specifications

- Grease viscosity: up to NLGI No.2
- Wetted components: aluminium, steel and nitrile rubber (and zinc for model K29-;
- Typical output pressure range*: 34 450 – 68 000 kPa (5000 – 10000psi)
- Output: 0.68 g per shot
