

Precision M-Series Metering for Innovative Drum and Bottle Filling Machines

Macnaught is proud of its long and successful association with *Pais DrumFillers*. Designed and manufactured by Alexander Pais & Associates Pty Ltd in Melbourne these unique semi-automatic machines can fill up to four drums on the pallet simultaneously- with exceptional speed and accuracy.

While the more traditional packaging systems use weigh scales to fill drums one at a time, the *Pais DrumFillers* incorporate 2 or 4 Macnaught M-Series positive displacement flowmeters into their design, thus doubling or even tripling the packaging rate.

Pais DrumFillers also completely eliminate the manual handling of heavy drums which is so important in today's OH&S conscious industrial environment.

Alexander Pais & Associates Pty Ltd has been involved in designing and manufacturing process automation systems and machines since 1992. Their list of clients include Exxon-Mobile, Dow Chemical, Fuchs Lubricants, Penzoil Oils and more.

The innovative use of Macnaught M-Series flowmeters in this application is testament to their versatility and to the design expertise of *Alexander Pais & Associates Pty Ltd*

If you would like to know more about *Pais DrumFillers*, please e-mail them at alexpais@optusnet.com.au or for more information on Macnaught M-Series flowmeters please contact your local Macnaught Flowmeter Specialist on 1800 185 102.
