

When Air Is Not Free... Consider the P3

The Macnaught POWERLUBE® is the ultimate in high pressure, air-powered greasing. With models to suit containers from 12.5kg (28 lbs.) to 22kg (48 lbs.), the P3 is fitted with a 50:1 ratio air motor which can run off most small compressors to provide fast, continuous greasing.

Most equivalents run at 0.16 m³/min (6 cfm), whereas the POWERLUBE runs at a meager 0.08 m³/min (3 cfm). So not only does the required compressor size (and consequently work area footprint) shrink – running the P3 is also **environmentally friendly** in its energy efficiency as well as much more **inexpensive to operate**. After all, one of the most costly items in any work area is the air.

The POWERLUBE is perfectly suited for underground use as well – it contains no aluminium and is safe for coalmines and similar locations.

Cost- and energy-efficient, safe to use wherever it is called on, adaptable and quiet, the Macnaught P3 POWERLUBE is the stand-out choice for fast, air-powered, continuous greasing.

And it's backed by a 10 year warranty and parts guarantee, giving you total peace of mind.
