

## Launching Macnaught GT Pump

**This technical bulletin details the release of a new version of the RAPIDFLO™ Pump. The GP-01 and GP-01-BD RAPIDFLO Pumps will be superseded by the GT-01 and GT-01-BD RAPIDFLO Pumps.**

The GT RAPIDFLO Pump family has been introduced to replace the GP RAPIDFLO Pump. The GT has some new features which enhances this already robust existing product.

- The new GT RAPIDFLO pump now has a new outlet body which is reinforced to absorb shocks if the unit is accidentally dropped or knocked.
- A new outlet configuration is now part of the design, with the outlet nozzle thickened and the addition of a 3/4 "BSP thread which will take a new hose tail. This will make fitting the hose more secure and will also aid in making the fitment of accessories such as the VA Filter kit.
- A new 1 "BSP thread is also included on the inlet side of the pump. This is to allow the use of a new suction tube system and allows easy fitment of CAMLOCK fittings if required (camlock not included).
- VA filter kit is now the Filter accessory kit for the GT RAPIDFLO.

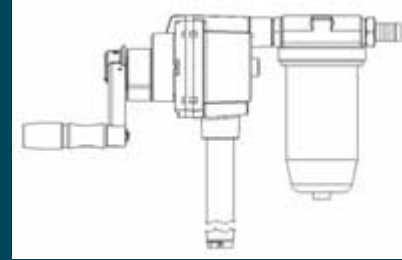

**Note:**

The GP RAPIDFLO will continue to be supported for spare parts as the internal components are fully interchangeable between the GP and GT.

If a GP RAPIDFLO pump has a failure to the outlet body, GP-1K will contain the redesigned outlet body along with the hose tail adaptor GM42, hose clamp & associated components. These new parts will enhance existing GP RAPIDFLO pumps and give end users many more years of trouble free fluid handling.

The VA Fuel Filter is particularly recommended for diesel fuel users. The Filter Kit is complete with all fittings to enable fast, simple installation and features a 10-micron filter element & see through bowl with drain cock.
